QUICKSI'LVER. *n. s.* [*quick* and *silver*; *argentum vivum*, Lat.]

Quicksilver, called mercury by the chymists, is a naturally fluid mineral, and the heaviest of all known bodies next to gold, and is the more heavy and fluid, as it is more pure: it is wholly volatile in the fire, and may be driven up in vapour by a degree of heat very little greater than that of boiling water: it is the least tenacious of all bodies, and every smaller drop may be again divided by the lightest touch into a multitude of others, the specifick gravity of pure mercury is to water as 14020 to 1000, and as it is the heaviest of all fluids, it is also the coldest, and when heated the hottest: the ancients all esteemed *quicksilver* a poison, nor was it brought into internal use till about two hundred and twenty years ago, which was first occasioned by the shepherds, who ventured to give it their sheep to kill worms, and as they received no hurt by it, it was soon concluded, that men might take it safely: in time, the diggers in the mines, when they found it crude, swallowed it in vast quantities, in order to sell it privately, when they had voided it by stool: but the miners seldom follow their occupation above three or four years, and the artificers, who have much dealing in it, are generally seized with paralytick disorders. *Hill's Materia Medica.*

Mercury is very improperly called a metal, for though it has weight and similarity of parts, it is neither dissolvable by fire, malleable nor fixed: it seems to constitute a particular class of fossils, and is rather the mother or basis of all metals, than a metal itself: mercury is of considerable use in gilding, making looking-glasses, in refining gold, and various other mechanical operations besides medicine. *Chambers.*

What is it, but rank poison in your veins. *Young.*

Metal is more difficult to polish than glass, and is afterwards very apt to be spoiled by tarnishing, and reflect not so much light as glass *quicksilvered* over does: I would propound to use instead of the metal a glass ground concave on the foreside, and as much convex on the backside, and *quicksilvered* over on the convex side. *Newton's Opticks.*

S.

S, Has in Engliſh the ſame hiſſing ſound as in other languages, and unhappily prevails in ſo many of our words that it produces in the ear of a foreigner a continued ſibilation.

In the beginning of words it has invariably its natural and genuine ſound: in the middle it is ſometimes uttered with a ſtronger appulſe of the tongue to the palate, like *z*, as *roſe*, *roſeate*, *roſy*, *oſier*, *noſel*, *reſident*, *buſy*, *buſineſs*. It ſometimes keeps its natural ſound; as *looſe*, *deſignation*; for which I know not whether any rules can be given.

In the end of monoſyllables it is ſometimes *s*, as in *this*; and ſometimes *z*, as in *as*, *has*; and generally where *es* ſtands in verbs for *eth*, as *gives*. It ſeems to be eſtabliſhed as a rule, that no noun ſingular ſhould end with *ſ* ſingle: therefore in words written with dipthongs, and naturally long, an *e* is nevertheleſs added at the end, as *gooſe*, *houſe*; and where the ſyllable is ſhort the *ſ* is doubled, and was once *ſſe*, as *aſs*, anciently *aſſe*; *wilderneſs*, anciently *wilderneſſe*; *diſtreſs*, anciently *diſtreſſe*.
